Cemetery Committee.

Report of Trustees of Public Library for year ending Feb. 29, 1896.

FIFTEENTH ANNUAL REPORT.

Circulating books on hand March 1, 1895,	3,561	
Purchased during year,	122	
Total number,		3,683
Public documents, pamphlets, reports, and		Tanana a
reference books,		477
Grand total,	and Al	4.160

Of 122 books bought during year, 105 are new books, which have not been in the library heretofore. These are selected from the best authors, and will, we think, make very entertaining reading. We would like to put in a few more new books, but did not want to exceed the appropriation, which has been curtailed a little this year. The demand for new literature is constant and increasing, and requests are often made for the same. The books are in good condition notwithstanding the number of hands they pass through in a year, as the librarian is careful in noting bad usage while in the possession of subscribers, which fact is very much appreciated by us.

Following is a statement of the receipts and expenditures:

FINANCIAL REPORT.

RECEIPTS.

75 1 1 1000 1 1	
March 1, 1895, balance,	\$142 17
Appropriation,	175 00

O. S. FOWLER,
A. G. HAYNES,
C. A. WHITNEY,

Assessors.

Report of the Overseers of the Poor.

The management of the Town Farm has been satisfactory; the land has been improved and more stock kept, from which there has been some profit realized. Your Overseers have offered to the Highway Department to open up a gravel bank found upon the farm and require the tramps to screen and work the same, for a moderate remuneration to our department, believing that we can furnish excellent material for the roads in that part of the town. We continue to supply the schools and others with wood sawed by tramps and inmates, to some profit to the department.

The wood shed recommended in our last report is still needed.

The number of tramps lodged during the year is large, and it is the opinion of some that they should be lodged under the supervision of the police department; at present this town appears to be a favorite place for the tramps to obtain lodging and beg food from our kind-hearted people, and if we can arrange to provide more real labor, it would be good exercise and discipline for them and of some benefit to the department.

Report of the Board of Health.

To the Board of Selectmen, Town of Maynard:

The Board of Health for the year ending March, '96, respectfully submit the following report:

The whole number of contagious diseases reported to the Board during the year have been ten, of which eight were scarlet fever, diphtheria two.

The past year has been a year of unusual freedom from diseases whose cause can in any manner be attributed to any particular defect in the sanitary condition of our town. The greatly increased number of calls to look after nuisances caused by the disposal of waste water, has been a source of trouble to the Board. When all the water used by consumers is pumped or drawn from wells, the quantity used may be easily disposed of in cesspools, and taken care of by the surrounding earth without danger of infection, if the cesspools are emptied and cleaned periodically. But when an abundant supply is furnished by the town water works, and its use is almost universal, the quantity used is so much increased that it is only a question of time when the earth about cesspools will become saturated with water and entirely filled with decomposing filth. And this condition will be found not only on one man's premises, but in entire neighborhoods, growing worse constantly as they become more thickly settled.

The Board has tried to have all causes of complaint remedied, and has taken into consideration, so far as possible, the cost to property owners, especially where a prospective sewerage system would make a difference with what ought to be done. Under present conditions some premises might be subjected to considerable cost to remedy what would easily be taken care of by public sewers.

The Board do not think fit at this time to make any recom-

mendations, but simply to point out the dangers likely to arise from the present conditions.

We desire to thank the property owners for their prompt response to our request for needed improvements on their premises, and we hope that every householder will carefully look after the sanitary condition of his own premises, and let no nuisance arise to be a source of danger to himself and family, or an annoyance to his neighbors.

THE THE TEAT OFFICE OF THE

SEVENTH ANNUAL REPORT

OF THE

WATER COMMISSIONERS.

To the Inhabitants of the Town of Maynard:

At the close of this, our official year, we hasten to congratulate our fellow citizens upon the termination of the Howland law suits, which for the past seven years have been a great burden upon the town. By the advice of counsel, Samuel Hoar, a settlement of these suits was effected Nov. 26, 1895, by the payment to the attorneys of Howland & Ellis of the sum of fifteen hundred dollars, this sum to cover all costs, and to secure judgment in favor of the town in each of the two cases, according to the finding of Judge Lowell.

While the town is thus freed from its long legal entanglement, its effects will be felt by the taxpayers for many years, as large bills for counsel fees and other expenses must be met, necessarily increasing our already heavily bonded debt. It is with eminent satisfaction that we can report the end of this contest, but we deplore the conditions which made its existence possible.

PUMPING STATION.

Somewhat extensive improvements have been made at the Pumping Station and its surroundings during the year. A durable floor has been laid in the pumping room, adding much to its comfort and appearance. All roofs of buildings, also the wood work of the pump house, both inside and outside, have been thoroughly painted.

NEW WELL.

The new well is proving all that we hoped for it, and is a valuable addition to our water system. By its use the delays attendant upon the single well system are now avoided and the

capacity of the works are more than doubled. As a means of saving water, coal and time, the new well is a success.

FENCE AND STOREHOUSE.

A substantial fence has been built, enclosing all buildings and wells and a considerable portion of the grounds. This was done for the better protection of the town's property in that locality, and to avoid the expense of putting a roof over the new well, which was considered unnecessary by the committee having charge of its construction.

A substantial storehouse, 15 by 30 feet, has been built within the enclosure, to take the place of the old building formerly used for storage, although it is not the property of the town.

In closing, we wish to admonish water takers to be careful in their use of water. We are convinced that a large amount is wasted, and to create an individual responsibility is our object in calling attention to this matter. Use all the water that is necessary, but waste none. If a faucet drips after due care in closing, see that it is repaired with a new washer at once. Thus, with a conservative use of water by the people; with a decrease in running expense, which our new well is sure to create; with the financial drain, the result of litigation, effectually stopped, and with a steady increase of revenue from water sales, this department will enter upon a period of prosperity which it has never before known.

Below will be found our financial report.

Committee.

DAVID HENDERSON,

L. MAYNARD,

REPORT OF SUPERINTENDENT OF WATER WORKS.

To the Board of Water Commissioners:

Gentlemen: I respectfully submit my seventh annual report of the Maynard Water Works for the year ending January 31, 1896.

There has been only one extension made this year. That is on Brown street, from residence of Wm. McAuslin to that of L. E. Marchant, 240 feet of 4-inch pipe, at a cost of about \$110.

STREET MAINS.

The distributing system of the town has given no trouble whatever during the year. There have been no leaks on the main pipe.

SERVICE PIPES.

The street mains have been tapped for new supplies in twenty-seven places. Add those in use at last report, four hundred six, making a total of four hundred thirty-three. There have been only two leaks on the service pipes, these being in the lead connections.

RESERVOIR.

In June the water became fermented, owing to the vegetable matter in White Pond, and we were obliged to empty and clean out the reservoir at a cost of \$17.

CONDUIT LINE.

The conduit line has given no trouble whatever this year.

PUMPING RECORD FOR YEAR 1895.

Month.	Coal used in Pumping, Heating and Banking.	Number of Gallons Pumped.	Duty.	Average Number of pounds of Coal per day.
February,	18,570	1,716,579	10,496,238	663.2
March,	18,489	2,264,490	21,042,157	596.4
April,	13,516	1,849,527	23,509,628	450.5
May,	16,456	2,470,311	25,915,733	530.8
June,	22,875	3,717,711	27,922,081	762.5
July,	17,698	3,739,095	36,297,405	570.9
August,	13,497	2,804,598	35,699,870	435.4
September,	11,783	2,083,482	30,763,362	392.8
October,	13,274	2,135,079	27,474,484	428.2
November,	10,591	1,781,838	28,904,437	353.
December,	16,350	1,706,724	11,817,921	527.4
January,	20,395	2,240,784	13,972,819	657.8
Totals,	193,494	28,510,218		

Average head, 206 dynamic.

Average duty for year, 25,129,934.4.

Average number gallons pumped per pound coal, 146.39.

PUMPING.

The pumping machinery has worked very satisfactorily during the year. There has been only one break, that being a small bolt, which was repaired at a cost of two dollars. The pumps are now in first class condition. The damper regulator attached to the boilers has been repaired at a cost of about \$7. The

boilers are now in good condition, as shown in the report of the Hartford Steam Boiler Inspection and Insurance Co.

With the steam pipes and new floor, which have been put in at the pumping station this year, the place can be kept warm

when the steam is turned off of the pumps.

The small duty of the pump is owing to the same cause as last year. But with the advantage of the new well which has been built, we expect much better results next year. We are now so equipped that we can run the pump steady for ten hours. This, with the reservoir, gives us enough water to fight almost any fire that can arise.

In closing I would say, notwithstanding the advantages of the new well, it will prove very unsatisfactory if it is not covered, as vegetable matter will grow in it if it is left open to the

light and sun.

THOMAS NAYLOR,

Superintendent.

The census taken May 1st, 1895, of the school children of Maynard, shows that there were 302, age 8 to 14, and 543, age 5 to 15.

The heating arrangement of the Nason street building is most unsatisfactory. During warm weather the ventilation is defective, and in cold weather it is impossible to make all of the rooms comfortable, or even safe for the children, and the committee has several times closed certain rooms, the pupils returning to their homes, thereby causing a loss to them which should be avoided.

The Smead system of heating now in use will require an increasing amount of repairing, and believing that rather than to expend much more for repairs upon the present unsatisfactory system, it will be better to replace it with some other method of heating that will give good results, your Committee, for the purpose of gaining information upon the best method of heating, and the cost of the same, appointed Mr. Crossley a sub-committee to investigate and obtain the desired information, and his report is herewith submitted.

It is our opinion that the first step to be taken is to provide double windows for the rooms most exposed, as there is a large glass surface. This would materially reduce the fuel expense of any system of heating. The comfort and health of our children imperatively require a decided improvement upon the present arrangements.

HIGH SCHOOL.

The work of the High School has been improved by the addition of another assistant, permitting an increased number of recitations, with longer periods for the same.

The principal, Mr. E. E. Sawyer, is now serving his second year, the school receiving the benefit of continuous service that strengthens a teacher's personal influence with the pupils.

Misses Emily L. Eldridge and Sara G. Hyde were employed for the school year, and are teachers who are well equipped for their work by a thorough college training and experience in high school teaching.

NINTH GRADE.

This is the grade from which pupils graduate from the Grammar Schools. The long service of its teacher, Miss Gordon, in our schools is the best evidence of the confidence reposed in her by your Committee.

Teachers and committee recognize the importance of the grammar grades in a town of this character, where so many of our children must forego the advantages of a higher education, and the efforts made to enable the largest possible number to graduate from this grade, are fully justified by the results.

This year we have the continued service of teachers in the 8th, 7th, 5th, 4th, 2d and 1st grades. There has been no changes among the teachers since the beginning of the school year, and your Committee fully appreciates the fact that there has been very little absence on the part of the teachers on account of illness or otherwise.

The good results of our system of graded work under the present favorable conditions are now easily recognized in the higher grades; the substantial and well formed foundations laid in the lower grades are now supporting a more complete and efficient equipment in the higher grades.

Departmental teaching in the higher grades has been practiced to a limited extent in drawing, music, physiology, geography and writing. This system enables us to utilize the special qualifications of our teachers, who, under this system, tend to concentrate their efforts upon their special lines of work. Grades cannot be better arranged than ours for the practical operation of this method, and it merits the careful consideration being given it by your Committee.

It has been necessary to continue the use of the Main street schoolhouse for one of the first grades. While it is a great convenience to children in that vicinity, yet to evenly divide the two sections of that grade, we have to assign pupils to the Main street school who live nearer to the Nason street school, showing that the centre of our population is near the new school building.

The number of pupils in the fifth and sixth grades is larger than a teacher can serve with the best results, but earnest efforts are made by the teachers to keep their pupils up to the desired standard.

@ 000 00

The room fitted for physics, laboratory work and class room, has proved to be a great help in teaching and illustrating several lines of studies. The plumbing, fittings, tables and cabinets are well adapted to the requirements of this department, and daily demonstrate the wisdom of the appropriation made for that purpose, inasmuch as a strong and efficient department in physics and chemistry has been established.

We desire to express our appreciation of the deep interest shown in so many ways by the people in their school department, and we can assure them that we realize the responsibility resting upon us in guarding the welfare of our little army of children who are so bravely striving to fit themselves for the discipline and battles of their lives.

We recommend an appropriation for the ensuing year of

nine thousand dollars for school purposes, also the amount of the overdraft to date of \$340.68.

We invite your careful consideration of the subjoined report of our sub-committee, Mr. Crossley, also that of the principal and acting superintendent, Mr. Sawyer.

(Signed.)

School Committee.

Committee on Heating and Ventilation.

I hereby submit, as requested by the School Committee, the following report relative to the present heating and ventilating apparatus in our school building, and suggestions regarding the improvement of the same.

The building is now equipped with seven furnaces for warming and ventilating, five of which were originally installed when the building was erected and two portable furnaces have since been put in, one in each corner of the building. There are also two small furnaces used for ventilating the sanitaries and a stove in the Laboratory is used for heating, making a total of ten fires which have to be cared for.

The present system is so defective and the apparatus is in such a condition that to improve it will require the introduction of new and larger furnaces, should the present system be adhered to.

This method of heating has been very expensive, consuming large quantities of fuel and giving poor results, and if larger furnaces are introduced the expense for fuel will be largely increased without proportional results. In fact, the present condition of ventilation is at times very bad in some of the rooms, this condition of affairs not being confined to any particular room, but varying, according to the wind and atmospheric conditions.

Serious trouble is often had by down drafts in the vent

flues, which sometimes discharge the air from sanitary flues into the room, making an awful and dangerous stench and endangering the health of all present.

This is due to the fact that the system relies wholly upon gravity to carry out its object; also to lack of power in the furnaces, and this can only be positively overcome by the introduc-

tion of a mechanical system.

It is at present found impossible to heat the rooms to a uniform temperature, owing to the large amount of glass surface. which rapidly cools the rooms and keeps the exposed portions at a much lower temperature.

On account of insufficient power in the furnaces, a very much smaller quantity of air is heated and delivered to the room than should be, causing poor circulation and diffusion of air in the rooms, improper heating and a very low degree of ventilation.

Knowing that the present system will have to be removed and that the repairing and overhauling of same would be an expensive, and by no means permanent, remedy, I have investigated the matter to see what could be done to provide a positive and economical system for our building, and I find that a low pressure steam heating apparatus, combined with a mechanical system of ventilation, would give such results as are obtained in the best heated and ventilated schools in the State.

Such a system could be installed with but little change above the basement and would be the means of securing the best of results, regardless of atmospheric conditions, both in summer and winter.

With the present system little or no ventilation can be obtained in some of the spring and fall months, as at such times little or no heat is required, and running in this condition, such a system is reduced to a minimum in efficiency.

With a mechanical system these defects would be entirely overcome, as gravity conditions would not be relied upon, and the amount of air delivered and exhausted from the rooms would depend upon the power of the fan propelling the air.

Other features in favor of this system are that the windows can be kept closed in warm weather, thereby preventing draughts and securing a thorough circulation of fresh air throughout the room.

This method of heating school buildings has been found to be the best and most economical for larger buildings like our own and much study and care has been exercised to reduce and simplify the care and operation of the same to a minimum.

As a source of economy in fuel it would be advantageous to place double windows on all of the rooms with a northerly and westerly exposure, as in these portions of the building the greatest difficulty has been encountered in attempting to heat.

This is due to the large amount of glass and outside wall surface, and while the placing of double windows would not be absolutely necessary should a mechanical system be adopted, yet were they used the cost of same would soon be offset in the saving that would be made in fuel.

In conclusion I would say that the matter of thorough ventilation is often disregarded by those who do not fully compreprehend the great importance of it, and while the evil effects from poor ventilation may not make themselves apparent at once, yet they are constantly present, and the effects upon the pupils are readily observed by comparing their health and general inclination to work with scholars who are confined in thoroughly ventilated schoolrooms.

Respectfully submitted,
WILKINSON CROSSLEY.

We would therefore earnestly recommend that the town take immediate and definite action in the matter and see that a system of heating and ventilating is provided for this building that will insure the healthful condition of the children and teachers and at the same time secure the necessary results in an economical and positive manner.

WILKINSON CROSSLEY,
ALVIN D. RUSSELL,
ALEXANDER VEITCH,
School Committee.

Report of Principal and Acting Superintendent

To the School Committee of Maynard:

I hereby submit my second annual report as Principal and Acting Superintendent of the Maynard schools.

It will treat of the following topics: Attendance, teachers, promotion, arithmetic, geography, physiology, drawing, departmental teaching, High School, laboratory, and miscellaneous.

ROLL OF HONOR.

PUPILS NOT ABSENT DURING THE YEAR 1895-6.

2 B-Herbert Mallinson.

MIXED-Albert Burgess, Frank May.

4TH-Mary Williams, Arthur Butterworth.

5TH—John McCormick, Nellie Binns, Catherine Marsh, Ethel Rich, Esther Bower.

6TH-Abby Colbert, Velma Littlefield, Clarence Gutteridge.

7TH-Albert Smith.

8TH—Alice W. Brown, Louisa A. Binns.

9TH-Ralph Case, Fred Marsden.

HIGH-Frank E. Johnson, William Maley, Minnie B. Hart, Nellie C. May.

PUPILS NOT ABSENT DURING SPRING TERM, '95.

1 A-Stephen Maley, Robert White.

2 A-Edward Ledgard, Eddie Treglown, Edna Dinniston, Florence Hart,

2 B-Patrick Murphy.

MIXED-Irene Martin, Maud Riley, Ethel Sims; Mae Smith, Amelia Sullivan.

4TH-Raymond Coulter, Elsie Parmeter, Beatrice Brooks, Nellie Cook, Richard Wagner, Fred Jones.

5TH-Charlie E. Carr, Alan Fisher, Irene E. Batley, Mary E. Bower,

Elizabeth Veitch.

6тн-William Clements, James Ledgard, Louis Martin, Herbert Ouash, Margaret Colbert.

8TH-Kate Connally.

9тн-Martha D. Binns, Lillie M. Childs, Annie Kimmel, Julia White, Edward W. Archer, Charles E. Smith.

HIGH-Joseph Brady, Joseph Jannell, Fred E. Morris.

PUPILS NOT ABSENT, FALL TERM, '95.

1 A-Charles F. Monroe, Margaret Kelley, Gertrude Morgan, Margaret Murphy, Mary Monroe, John Sullivan.

1 B-Walter Comeau, Lawrence Jones, Martin Jensen, Page Junkins, Ida

Moore.

2 A-Wallace Locke, Ray Prescott, Oscar Roberts, Philip Bower, Hans P. Hansen, Warren Hansen, Elsie Dimery.

2 B-Alvin D. Smith, Ernest Jones, Louis Parmeter, Albert Priest, Mar-

garet Driscoll, Theresa Hefferman, Grace Otis.

3D-Harold Butterworth, Joseph Donahue, Harry Persons, Ethel Butterworth, Lizzie Cleary, Edith Davis, Madeline Judkins, Margaret Long, Florence Mann, Annie Manning, Gertrude Ratcliffe, Maggie Sullivan, Mabel McAuslin.

MIXED-Arthur Dimery, Willie May, Herbert Whitney.

4TH-Arthur Butterworth, Alva Dorherty, James Farrell, John E. Kelley, John Manning, Mildred Burgess, Theresa Donahue, Laura Jamieson, Maggie Ryan, Mabel Mallinson.

5TH-Alick Bouske, Charles Carr, Eugene Thompson, Eugene Greenhalge, Ella Keith, Florence Pond.

6тн—Jannette Binns, Mary Driscoll, Susan Lingley, Margaret Murphy, Margaret Mahan, Nellie Puffer, Howard Case, Frank Hayward, George Kaler, Louis Martin, Frank Murray.

7тн—Helen Marsden, Margaret Sullivan, Ernest Greenhalge.

8TH-Lizzie Crabtree, John J. Twomey, Willie L. Dyson.

9тн—Charlie Crossley, Henry Ledgard, George Bishop.

HIGH-Albert Bateley, Jessie M. Blanchard, Frank P. Fearns, Sidney E. McCleary, Glinton S. Mesler, Alfred J. Wagner, Julia L. Long, Lizzie R. May, Sadie I. Rand.

ATTENDANCE.

The per cent. of attendance for the year shows a falling off when compared with last year, but the average for the fall term of this year is two tenths of one per cent. more than the average of the fall term of 1894. According to the State report for 1893-94, there were but four towns in the county whose per cent. of attendance was higher than that of Maynard.

The number of cases of tardiness for the last term was 178 and the number of different pupils tardy was 52, which shows that the cases of tardiness are confined to a comparatively small

number of pupils.

From my observation this year, I think the above good record can be made still better. There have been cases of absence and tardiness without sufficient excuse, and although the teachers are not responsible, I think their efforts will be able to diminish the number for the coming year.

TEACHERS.

During the school year of 1894 and '95 there were two changes in the corps of teachers. In June, '95, but four teachers resigned, tempted by higher wages elsewhere, and during the last five months I am pleased to record no resignations. The two rooms in which changes occurred last year previous to June, '95, have this year shown marked improvement, due principally, I believe, to the fact that no change has been made.

PROMOTION.

A higher standard was required for promotion in June, '95, resulting in better work during the present year and thereby the scholarship of each grade is higher and more even. A few pupils far below their grade act as a load that must be carried and the progress of the whole school is retarded. Our experience this year shows no mistakes made in requiring more pupils to repeat a grade than heretofore.

ARITHMETIC.

A lack of ability to perform simple problems has been noticed, and to remedy this, more problems involving simple combinations have been introduced in the third and fourth grades.

By the nature of the work in higher grades concrete examples must necessarily be used, but familiarity with concrete work

must be obtained in grades below the sixth.

The pupil in the first two grades acquires the knowledge of the simpler combinations, and then these should be woven into easy problems involving every phase of business with which the child can be made familiar.

The problem calls for more mental effort than the simple combination required by the condition of the problem. These problems should involve combinations below rather than above the limit of work for the grade.

GEOGRAPHY.

Frye's large geography has been placed in the eighth grade, and both Frye's and Potter's small geography in the fourth and

fifth grades.

Last year the sixth and seventh grades were supplied with Potter's geography; thus all grades that need geographies are now supplied with the latest text books. Pupils will spend two years in the small and three in the large geography.

PHYSIOLOGY.

The State Board are employing Mrs. Ella B. Hallock to give talks to the teachers of Massachusetts on Physiology or Physical Training. In November, '95, Mrs. Hallock visited Maynard and awakened new ideas on this all important topic. The teachers have taken greater interest in this line of work and already the talk has begun to bear fruit. All teachers feel deeply the importance of the subject and their own responsibility for the physical condition of the next generation, but the methods of teaching and amount of work done differ widely. We are told in courses of study to teach the subject according to the requirements of the Commonwealth. This has made unduly prominent throughout the grades the subject of stimulants and narcotics and left Physiology in the background. To intelligently comprehend the effects of stimulants and narcotics upon a given organ, the structure of that organ must first be understood. When the pupil is old enough to understand the structure of the heart, let that instruction be followed by that of the perfect action of the heart and the penalties for wrong doing. From the first year of school the perfect body should be made more important than the imperfect, and the effect of not touching rather than the effect of touching alcholic drinks.

Our boys and girls are given by nature sound bodies, and all instruction in Physiology and Temperance must tend to keep alive the desire to preserve those bodies in that sound condition.

DRAWING.

Drawing has now been added to the subjects taught under the departmental plan. This subject in the seventh and ninth grades and High School has been in charge of the same teacher. Great progress has been made in the last five months and a keen interest awakened. If the plan could be extended to other grades, we feel sure of the same gratifying results. When drawing is well taught it reacts in a beneficial way upon mathematics, sciences, history and geography, or all subjects which require illustration.

DEPARTMENTAL TEACHING.

The plan of departmental teaching is steadily gaining adherents throughout the state, and is sure to be adopted in schools favorably situated.

Experience in Maynard the past year has confirmed my opinion of one year ago that the adoption of departmental teach-

ing would be a step in advance in our grammar grades.

Drawing and music in two grades, geography, physiology and writing, each in one grade, are now taught by teachers of other grades, and I do not hesitate to say that in every case the character of the instruction is better than if given by the regular teacher.

The objection most often raised against this plan is that the discipline is likely to suffer, but our experience seems to prove the opposite. The teacher that has charge of classes in succession will bring more enthusiasm to her work.

At least twelve subjects are now required to be taught with equal care and thoroughness in the upper grades, but this ideal

is never reached except under the departmental plan.

Every teacher has her favorite studies, upon which there is a tendency to spend a little more time than upon others and in this way the program is interrupted.

The pupils want regular work and delight in being on time, and the regularity of periods and sure prospect of recitations under the departmental plan tend to strengthen this habit of

regularity which is so important to the business man.

Perhaps the greatest benefit to be derived from this scheme of teaching is in the quality of instruction given. If a teacher has especially prepared herself in some subjects, or is more adapted to teach a particular branch, her services become more valuable by allowing her to teach that subject in several rooms.

The smaller number of subjects necessary to a teacher will give ample time for preparation and independent research in the

way of buying and inventing devices in aid of methods.

High School subjects have always been taught under the departmental plan and the line between the lowest class of the High School and ninth grade is an arbitrary one, with no valid reason why the plan is not adapted to grades above the fifth. Again, our rooms could not be better located than they are and would add much to the success of the plan.

HIGH SCHOOL.

The High School has had a prosperous year and I am pleased to record the advance made in several lines. There are a large number of pupils who try to excel in what they undertake and are endeavoring to obtain an education for the position it will give them in society, the state and the nation.

The High School is the place for the pupil who desires to do his work as well as he can, and he must not stop short of that.

In school, as in trade, competition is its life.

In September, '95, another teacher was added to the force in the High School, allowing us to give the pupils seventy-nine recitations per week in place of sixty-five last year, and all the periods for recitations have been lenghthened. To this, in part, I attribute the fact that the pupils are four weeks in advance of their work last year.

Instead of omitting recitations to find time in which to superintend the grades, the Principal now has ten periods a week in which the work can be done without taking the time properly belonging to the High School.

The number of days and parts of days absence of grade

teachers since September, '95, has been twenty-four, and during that time their rooms have been in charge of the High School teachers, a substitute having been procured in one case only. Seniors in the High School or substitute teachers do not maintain the discipline of a room as well as the regular teachers in the building, and this discipline is necessary if the pupils are not to lose ground while their teacher is away.

With the proceeds of an entertainment consisting of declamations, readings and music of a patriotic nature, a beautiful flag was procured to replace the one so faithfully used since the

building was erected.

A contest in declamation and recitation by pupils of the High School, was held March 29th, '95. Four prizes, consisting of books, were awarded to the following pupils: First prize, Lena P. Russell and Joseph W. Jannell; second prize, Bertha E. Batley and John H. Lawton. Those who win first prizes are not allowed to compete again.

This year the twelve speakers will be chosen from the three upper classes by a preliminary contest and the same number of

prizes offered.

The contest held last year awoke an interest that has produced results both in and out of school.

LABORATORY.

During the summer vacation a laboratory was fitted up in the north wing of the building under the immediate supervision of Mr. Russell, Chairman of School Committee. It has accommodations for twelve in Chemistry, a large table to be used for experiments in Physics and ample room for twenty pupils to be seated in recitation. The room has been in constant use since September, '95, and has been found admirably adapted to its threefold purpose.

The interest shown in the Physics and Chemistry classes proves that with a suitable room good work can be done with but

a small expense for apparatus.

MISCELLANEOUS.

Illustrative material has been purchased for the subject of geography, but more is needed, and there is an imperative necessity for charts and apparatus to be used with physiology and physics. A better quality of supplies has been purchased this year, and I believe it has contributed to the better work done.

Maynard holds the following rank among the 54 towns and cities of the county as given by the last two annual reports of

the State Board of Education of Massachusetts.

In 1893-94 thirty-nine towns and cities in the county of Middlesex appropriated more money than Maynard for each pupil between the age five and fifteen. The amount per pupil was \$13.90, or \$2.24 less than the average for the county, which was \$16.14.

In 1894-95 forty towns and cities appropriated more than Maynard. The amount per pupil appropriated by Maynard was \$14.15, or \$2.47 less than the average for the county, which

was \$16.62.

In 1893-94 Maynard appropriated 3.46 mills for the support of schools for every dollar of taxable property, and in 1894-95 3.59 mills for every dollar. Thirty-two towns and cities appropriated more in 1893-94, and twenty-three in 1894-95. In average attendance, as compared with the number of pupils in town between five and fifteen years of age, there were twenty-eight towns and cities that took higher rank than Maynard in the first of the above mentioned year and but fourteen towns in the last year.

CONCLUSION.

The relations of the school committee, teachers and superintendent throughout the year have been harmonious and all have cooperated to make the schools of Maynard more efficient.

I wish to thank the teachers and committee for the aid and

encouragement they have given me in my work.

The parents have shown an increasing interest in the schools by more frequent visits. This should be commended, as it establishes a more cordial relation between the parents and teachers, and reacts in a direct way upon the enthusiasm of the pupils.

E. E. Sawyer,

Acting Superintendent.

Town Warrant.

COMMONWEALTH OF MASSACHUSETTS.

MIDDLESEX, SS.

To either of the Constables of the Town of Maynard, in said County, GREETING:

In the name of the Commonwealth of Massachusetts you are hereby directed to notify and warn the qualified voters of said Town of Maynard, to assemble at Co-operative Hall, on Monday, the ninth day of March, next, at ten o'clock in the forenoon, then and there to act on the following articles:

ARTICLE 1. To choose a Moderator to preside at said meeting.

ART. 2. To choose by the Australian system of balloting, the following town officers: One Town Clerk, one Town Treasurer, one Collector of Taxes, one Selectman for three years, one Overseer of Poor for three years, one member of the Board of Health for three years, one Water Commissioner for three years, one member of School Committee for three years, one Trustee of Public Library for three years, two Auditors for one year, three Constables for one year, and all other necessary Town Officers to be chosen at said meeting.

Also, to answer, by the said Australian system of balloting, the following question: Shall licenses for the sale of intoxicating liquors be granted in this town?

For the purpose specified in this article, the polls will be opened after the election of a Moderator, and will remain open until four o'clock in the afternoon, when they shall be closed, unless the meeting there assembled shall otherwise determine.

ART. 3. To hear and act upon reports of Town Officers and Committees.

And your are directed to serve this warrant by posting copies attested by you, at the Post Office, and at each of ten other public places in town, seven days at least before the time of holding said meeting.

Hereof fail not and make due return of this warrant, with your doings thereon, to the Town Clerk or Selectmen, on or before the time of holding said meeting.

Given under our hands this twenty-sixth day of February, in the year of our Lord one thousand eight hundred and ninety-six.

and the same whole the same of the same of

James Higgins,
Samuel Lawton,
George Flood,
Selectmen of Maynard.

25 - 32 , or per ...
