Ridley & Hosmer,
Consulting Engineers.

Concord , Mass.

December 12, '24.

Mr. John F. Lovell, Treasurer,
Lovell Bus Lines, Inc.,
Maynard, Mass.

Dear Sir:-

We herewith submit the report on the Concord,
Maynard, & Hudson Bus Line, which you requested in
your letter of October 9, 1924.

This report is lacking in detail due to
our inability to get exact figures concerning the
operation of your bus line. We feel that more time
and research work is necessary to get a real definite
report.

Respectfully submitted,

Walter H. Ridley
Cyrus Hosmer, Jr.

LOVELL BUS LINES, Inc.,

Maynard, Mass.,

October 9, 1924.

Mr. Walter H. Ridley,

Mr. Cyrus Hosmer, Jr.

Concord, Mass.

Dear Sirs:-

I have been asked by the Massachusetts Motor Bus Club to furnish them with a complete report of the Concord, Maynard, and Hudson Bus Line for ten months beginning January 1, 1924. Sometime ago you suggested writing such a report; if you are still at liberty to do this, I would appreciate your starting work as soon as possible.

Very truly yours,

(Signed) John F. Lovell,

Treasurer.

REPORT.

REPORT ON THE CONCORD MAYNARD & HUDSON BUS LINE.

INTRODUCTION

Purpose.

The purpose of this report is to secure complete information concerning the Concord Maynard & Hudson Bus Line for a period of ten months beginning January 1st, 1924. Having done so, we have compiled this information in such a way as to determine the Bus Line's condition financially and otherwise.

Scope.

This report includes the history of the above named Bus Line, the territory in which it operates, and its standing in same. A general comparison with other bus lines is made. The report also considers the probability of the future success of this company and the present and future benefits to the communities in which it operates.

Method.

We inspected the various books of the company in person, thus obtaining actual figures which have to do with the operation of the busses. Several visits were

made to the company's headquarters, during which a survey of the property, equipment, and rolling stock was made. We have read extensively about bus line operation in magazines, from which various clippings have been taken and included in this report.

SUMMARY

Statement of Problem.

The problem in this report was to determine the financial condition of the C.M.&H. Bus Line as well as its standing in the communities served by it.

Solution of the Problem.

A study of the problem has lead us to conclude that the standing of the bus line in the various towns was very favorable. The financial condition, however, is unsatisfactory, due mainly to very inefficient operation. This was discovered thru an investigation of the bookeeping methods of the company, of the bus-records of the company, and of the method of fare-collecting used by the company.

Recommendations.

We recommend the following:

- (1) that speedometers be installed on all busses;
- (2) that an accurate individual bus-record be kept;
- (3) that a more standardized system of bookeeping be installed;
- (4) that a new system of fare-collecting be put into operation as explained on page 22 of this report.

BODY OF REPORT

History of the Company.

The Concord Maynard & Hudson Bus Line is an off-spring of the Woburn & Reading Bus Line, which was incorporated Aug. 21, 1919. This parent line operated busses in the towns of Woburn, Reading, Wakefield, Burlington, and Wilmington from September, 1919, until January 1, 1923, when it turned over its entire business, including busses and all, in these towns to the Eastern Massachusetts Street Ry. for a fair price paid by the latter.

During January 1923 the Woburn & Reading line started running busses between Maynard and Acton, and a month later from Maynard to Concord, having secured permission from the towns concerned to do so. In April of the same year busses were operated from Concord through Maynard to Hudson. It was from these towns that the line took its name, by which it has been known ever since.

However, on February 18, 1924 the name was changed to Lovell Bus Lines Inc., the reason for this

being that under this name busses could better be run to towns other than Concord, Maynard and Hudson. An illustration of this was the extending of the main route to Clinton on September 8, 1924.

A brief summary of the growth of the parent company and its off-spring can be had by referring to Appendices A, B, C, D, and E, which are the statements of condition to date.

The Nature of the Company's Business.

Although the real name of the company has been discussed above, we will make all references to the C. M. & H. Bus Line. This company is now engaged in carrying passengers in the following towns: Concord, Concord Junction, Maynard, Stow, Gleasondale, Hudson, Berlin, Clinton, South Acton, and West Acton. The main line, so-called, includes all but the last two towns. On this line busses run hourly from 6:30 A.M. to 11:30 P.M., from Maynard. On the Maynard-South Acton-West Acton line, they run according to certain designated hours according to time-table. Since to give the complete time-table here in the text would be very confusing and difficult, we have entered that as Appendix F, which can readily be referred to if desired.

Outside the scheduled trips there are special trips for; (1) school-children; Two extra busses are needed each morning and afternoon to take high school pupils from Concord Junction to Concord and back, a distance of about two miles; the Town of Acton has contracted to use two busses each school day to bring pupils in the rural districts to the grammar schools, these busses covering about fifty miles a day.

Under (2) come the workmen specials which run in the morning, noon, and night to carry the mill-help to and from the mills in Maynard, South Acton, Hudson, and Clinton.

Then come (3) the miscellaneous special trips run for those who so desire for a nominal charge per mile. In the summer and fall months, busses are chartered to carry the Maynard baseball team and followers to their out-of-town games, for example, or picnic crowds to the beaches. Since these special trips occur usually on Saturdays or Sundays when the schools and sometimes the mills are closed, the rolling stock of the company is kept moving most of the time. During the winter, the lodge-meetings in the various towns help keep the stock arolling; traffic is heavier, and the schools are open

besides.

The minimum fare charged is 10¢ for everybody except school-children, who ride at half-fare on school-days, and workingmen, who may ride at slightly cheaper rates through the use of commutation tickets. At the western end of the line these tickets have proved to be very satisfactory, the percentage of workingmen using the busses there being greater than on the eastern end. However it was just recently that this privilege was extended to the Concord end of the line. A fare-schedule, and sample tickets in Aps. G & H.

The method of fare-collection is to pay-as-you-enter the exact fare to your destination. No receipts are given upon payment of fare, so the driver has to depend solely upon the honesty of the passenger.

In order to operate busses in the various towns the company must get permission from the towns concerned each year. In some of these towns a bond must be deposited through the selectmen.

The busses are used for carrying the Boston evening papers to Maynard from Concord, thus getting the news which left Boston at 2:30 in the afternoon to Maynard by 3:30. There is, of course, a small charge for this service.

Whenever possible the busses meet the trains; this accommodation is greatly appreciated by the residents of the towns which have poor railroad service or none at all. The schedule of the busses is now so arranged so as to meet certain trains in the various towns each day barring unavoidable delays, but in doing this the regular service has to be slightly altered, and usually means making up the time lost in so doing.

During the winter, the busses are equipped with snow-plow attachments, by means of which the lines are kept open and schedules maintained. In the past, this has been done very satisfactorily with much less modern equipment than they now possess.

Facts about the Towns Served by the Bus Line.

An examination of the map (Appendix O) will give the relation of the aforesaid towns to one another, and the routes the busses travel to reach them; a table showing the relative population of these towns is also in the Appendix under the heading Appendix I. A few facts about these towns follow, each community being taken up separately.

CONCORD.

Concord center marks the eastern terminus of the line. It is a town of 6500 inhabitants and is well served by the Fitchburg Division of the Boston & Maine Railroad, also by one train a day each way on the Lexington Branch of the same road. The Middlesex & Boston Street Railway run busses at certain scheduled hours from Concord to Arlington Heights, via Bedford and Lexington. These busses do not run as often as do those of the C. M. & H., but on certain trips both lines arrive at Concord at the same hour, thus giving practically continuous passage into Boston from Maynard and other towns west at a rate much cheaper than that of the railroad.

There are no mills or large business houses in Concord Center, it being largely a residential town. It does have a large high school, which necessitates running extra busses for carrying pupils.

In order to get some idea as to the geographical location of this town, we might add that Concord is 18 miles directly west of Boston on the Mohawk Trail automobile route. It is on the Sudbury and Concord Rivers.

CONCORD JUNCTION.

Sometimes known as West Concord, this village breaks up the 6 mile gap between Concord and Maynard. It comprises about one-third the total population of Concord yet only about one-sixth of its area. As its name implies it is at the junction of two railroads: the Fitchburg Division of the Boston & Maine and the Lowell-Mansfield Division of the New York, New Haven & Hartford. However the service rendered by these railroads is comparatively poor, and the people are obliged to ^{the busses to} use the Concord railroad-station to get good trains. Like Concord this village has one train a day each way on the Lexington Branch, which terminates at the Reformatory. The distance from Concord Center to Concord Junction is about two miles.

Concord Junction is a small industrial center, having a woolen mill, a chair factory, a foundry, a harness and leather goods shop, and a few other small plants.

MAYNARD.

This is a mill-town of some 7100 inhabitants. The American Woolen Company has a large mill here and employs some 500 men and women ~~on the~~. The town is

six miles directly west of Concord and is on the Marlboro Branch of the Boston & Maine Railroad. Train service is not exceptionally good, however, the people using South Acton and Concord stations for going to Boston or more distant points. This is made possible since busses run from Maynard to South and West Acton as well as to Concord, Hudson, and Clinton.

The headquarters of the Company are located in the town of Maynard, this being the central point.

STOW.

One of the connecting links between Maynard and Hudson is the town of Stow of 1100 people. This village has no station on the Marlboro Branch of the Boston & Maine, the nearest one being Lake Boon about three miles distant. Hence the busses are practically the only public carrier the residents of Stow have.

Stow is three miles west of Maynard, and, on what was once known as the Fitchburg Turnpike.

GLEASONDALE.

This is a very small village and part of the town of Hudson. It has railroad-stations on two Boston & Maine lines (Marlboro Branch and Central Massachusetts), but the trains are few and far apart; here again the busses are the main means of travel as they

run at least hourly towards Hudson and Maynard.

There is a small factory located here in Gleasondale, which accounts for some of the passenger traffic handled in this vicinity.

HUDSON.

Hudson is another industrial center, having a rubber factory as well as some small plants besides. Like Gleasondale it is on the same two railroads, enjoying the same kind of service. The Boston & Worcester Electric Air Line have a branch line extending from Marlboro to Hudson which makes good connections with the C.M. & H. busses at the latter terminal.

This town has a population of about 7600, and is 6 miles from both Maynard and Clinton.

BERLIN.

A very small town is this village of Berlin. It is of about 900 inhabitants, has no industries, and one railroad-station. It depends largely upon the C.M. & H. busses for its transportation.

CLINTON.

This is by far the largest town served by the

C.M. & H. Bus Line. It has many business houses and manufacturing establishments. Two Boston & Maine Railroads enter the town, but only one competes with the bus line in any way; that is the Central Massachusetts, which takes in such towns as Berlin, Hudson, and Gleasondale. This railroad also includes Worcester, hence making it possible to get from that city to towns east served by the busses.

It is at this Clinton end of the line that working-men's commutation tickets are used mostly.

SOUTH ACTON.

The town of Acton includes South, West, East, and North Acton and Acton Center. The bus line just operates in the first two of the above named districts. South Acton is a mile and a half from Maynard in a north-easterly direction; it is on the Fitchburg Division and Marlboro Branch of the Boston & Maine and has pretty good train service. There are two mills in this village.

WEST ACTON.

This town is also on the Fitchburg Division, but does not have as good service as does South Acton. It is more of a residential town and borders the South

Acton and Boxboro. The good service rendered by the busses insures good transportation to the West Acton townspeople as well as to the rural inhabitants.

The Company's Equipment and Facilities.

At present the company owns 11 busses, 2 trucks, and 2 taxies, and has complete facilities for housing and repairing same. Most of the motor-busses are new and modern and carry an average of 25 passengers, being typical of the type used for short hauls. The company has a variety of truck-makers, as can be seen by referring to Appendix J, which lists the trucks and various facts concerning them. We have attempted to show the type of bus that predominates by a few cuts, which we entered in the Appendix under K.

The repair and machine shop is very well equipped, so that no work on the trucks has to be done outside. Overhauling is done here as well as all emergency cases; brakes are relined and valves ground. Batteries are even repaired and charged. There is a compressed air tank for inflating tires. Plenty of gas, oil, grease, and alcohol are kept on hand as are also repair parts, tires, tubes, and chains. The company does all its own painting and also outside paint jobs.

In the rear of the machine shop is the boiler-room, which supplies the entire building with steam-heat. The building covers about 90,000 square feet floor space and is a single story structure about 25 feet high, hence requiring a large amount of heat. The temperature does not have to be kept very high, but at point so as to keep the trucks warm, thus insuring quick starting in cold weather. The company has housing facilities to hold at least 25 busses. The garage is of fire-proof construction, being made of brick with a fire-wall inside dividing the bus-storing quarters from the machine shop and the office. Pictures inside and outside were taken and will be found under Appendix L.

Officers.

The officers of the company include the following:

Mary C. Lovell, President,

John F. Lovell, Treasurer,

Ethel M.D. Fayton, Secretary.

These officers are elected for term of one year.

Labor.

The company employs 9 men as drivers of

the busses, 2 men as repairmen, 1 for general duty, 1 foreman, and 1 bookkeeper, a total of 14; all work nine hours a day with the exception of the bookkeeper who works six. None of the employees belongs to labor unions.

Insurance.

All of the busses are insured against public liability, property damage, and accident, the cost of which amounts to a very large sum each month. The insurance company requires that each driver carry with him a pad in the form of a brief questionnaire to be filled out by persons injured in or witnessing an accident. Upon the driver's arrival at the company's headquarters, a more detailed questionnaire is filled out in duplicate, the original being sent to the insurance company's claim division, while the other is retained by the bus line. Samples of these forms are given in Appendix M.

Operation.

The company has rendered very good service to the towns which it serves, hence in this respect the operation is efficient. As regards the cost of operation,

it is a difficult problem to determine whether the maximum benefits to the company are being obtained or not. We have had access to all the figures (accounts, mileages, receipts, expenses, etc.) that were available at the company's headquarters, and from these have attempted to get a definite relation between cost per bus-mile and income per bus-mile, but the necessary figures for this relation could not be obtained except in round numbers. As such, they were of no definite value, although we have based our conclusions and recommendations on what we did obtain in the line of figures. Appendices A, B, C, D give the statements of condition of the original company and the present company upto January 1, 1924. Appendix E gives the same on November 1, 1924. A study of D and E shows that both Notes Payable and Accounts Payable have increased rather unproportionately compared to increases in the other items. The Accounts Receivable have shown a small increase, however. The most outstanding item is that of surplus which has decreased by an amount of \$2900. It is out of the surplus that the loss from operation is taken, or which is increased when there is a

profit from operation; hence from these statements it would appear that the company is operating at a deficit.

We have compared the income and cost per month before the extension to Clinton was put into effect with the same afterwards, and find that it has benefited the company rather than placed an increased burden upon it.

Thus the efficiency of operation from the company's standpoint is not very favorable, there being a great chance for improvement.

CONCLUSIONS

Having made an extensive survey of the Concord, Maynard, & Hudson Bus Line, we conclude that it has established a favorable reputation in the towns which it serves; its equipment, rolling stock, repairing and housing facilities are in first-class condition; its financial standing is non-too-favorable, due to the inefficiency of operation, which in turn is due to the comparative newness of using the motor-bus as a means of transportation; the prospects of future success by the company are favorable.

RECOMMENDATIONS

We therefore recommend that:

- (1) speedometers be put on all busses and kept in running condition;
- (2) an accurate individual bus record be kept (preferably on a printed form) to include such items as gas, oil, miles, drivers, runs, receipts, number of passengers carried, repairs, tires, and remarks.
- (3) a more standardized system of bookkeeping be installed to supplant the very inefficient system now in vogue.
- (4) the pay-as-you-enter system of fare-collecting be abolished, and a system by which a printed check be given the passenger upon entering the bus showing just where he got on, this to be surrendered by him to the driver when his destination is reached, and the proper fare paid upon leaving.

Respectfully submitted,

Cyrus Hosmer, Jr.
Walter H. Ridley.

 From Hudson 11 40 and 4 40 for
 Maynard leaves at 12 00 and 5 00

You read and look afar with equal facility, but no one observes that you are wearing bifocals because the usual "lines" are absent. Wear the genuine KRYPTOKS awhile and you will never willingly return to old-style bifocal glasses.

General Utility Truck.

Woburn-Reading Bus Line, Inc.

In case of any accident, HOWEVER SLIGHT, in connection with or near your bus, to persons or property, you will AT ONCE render all necessary assistance, and AT ONCE obtain the names and residences in full of the persons injured and of ALL WITNESSES on or near the bus, then fill out this report and send it in without delay. You must answer fully and accurately the following questions, and also state all other particulars. If two busses are concerned in the accident both drivers must report. All disputes and troubles (which occur on your bus) must be reported as accidents. Any neglect to report will be a cause of discharge. Also report at once upon this blank any defect in any bus or street liable to cause accident.

USE INK IN WRITING REPORT

1. Date of Accident,	192	Date of Report,	192
2. Hour of Accident,	o'clock,	M.

HOW NUMBER OF MOTOR VEHICLES HAS JUMPED

GROWTH
OF
MOTOR VEHICLE USE
IN
NEW ENGLAND

In seven years the motor vehicles in New England, including trucks, have multiplied two and one-half times, as the above chart shows. Today the number of commercial cars is 158,000, and of all motor units 1,050,000. At conservative market valuation they constitute

an investment of \$500,000,000. Problems created by the great increase in the number of motor vehicles will be discussed at the New England motor transport conference next Monday and Tuesday at the Copley-Plaza.

A survey of the Hawaiian Islands was begun the resulting maps are being published on a scale of 1:250,000. The features shown on these maps are classified in three groups—(1) water, including seas, canals, swamps, and other bodies of water; (2) land, including mountains, hills, valleys, and other elevations; (3) culture (works of man), such as towns, railroads, and boundaries. The conventional signs for these features are shown below, with explanations, appear on some earlier maps.

THE DIRECTOR
of the Survey
of the Hawaiian Islands
has ordered that the
maps of the Hawaiian Islands
be sold for 25 cents
per copy, and that the
order (not post)
request.
