October 10, 1983

## Two named vice president

Jeff Kalb

Sam Fuller and Jeff Kalb have been appointed vice president reporting to Jack Smith, vice president, Manufacturing and Engineering. Sam Fuller will be vice president, group manager, for Research and Architecture and Jeff Kalb will be vice president, group manager, for LSI.

Sam joined Digital in 1978 as the Engineering manager for the VAX Architecture Group. From 1978 through 1983 he held a variety of positions in Engineering and until this appointment, was group manager of the Research and Architecture Group. He has been instrumental in setting the future direction of Digital's Systems Architecture and has worked on the CI, Local Area Networks and High Performance Workstations. He has also initiated our joint research projects with MIT and other universities

Before joining Digital, Sam was an associate professor of Computer Science and Electrical Engineering at Carnegie

## Digital leads industry with personal computing announcements

At a press conference in New York City late September, Digital announced the Rainbow 100+ personal computer, an addition to the Rainbow series which features a 10-megabyte Winchester hard disk and substantially increased memory capability. The company also introduced the industry's most comprehensive investment plan for personal computer buyers.

The service and warranty package, called the Investment Protection Plan, is in direct response to buyers' demands for complete satisfaction with their purchase, said Joel Schwartz, vice president of the Small Systems Group.

#### Sets new standard

"We believe the Investment Protection Plan is unprecedented," he continued. "It sets a new standard that others will have to meet. Vendors have offered limited service or support plans, but none, to date, has offered a program as comprehensive as this one. In fact, few could have the resources to do so."

The Investment Protection Plan provides buyers of the Digital Rainbow, Professional and DECmate II with: on-site warranty service including parts and labor, updates for selected operating systems, a user news-

letter and a limited-offer, 30-day money-back return policy.

For those who buy at the retail level, Joel explained, many of the features extend up

to one full year. For corporate buyers, via Digital's direct sales force, the plan is offered for 90 days and is extendible to one Continued on page 2

At CP/M '83, a major personal computer trade show held last week at the Hynes Auditorium in Boston, more than 500 CP/M-based applications software packages were demonstrated on the Rainbow. Here Katrina Holman, product promotion specialist, demonstrates Lotus 1-2-3 on the new Rainbow 100+ for attendees.

## IDECUS Fall Symposium slated for November

Learn how Digital's largest customer group, internal users, put Digital's products to work for greater productivity. Discover how others may already be solving your computing problems. Find out about Digital's latest corporate products, applications and technologies all at Internal DECUS's Fall Symposium.

Scheduled for November 17 and 18 at the Sheraton Conference Center in Boxborough, the Fall Symposium will include over 50 sessions conducted as workshops, panel discussions, or tutorials, designed for managerial and technical audiences. There are sessions planned on personal computing, manufacturing systems, networks, office automation, new products and other topics of interest to internal users. Ed Kramer, vice president of Corporate Marketing will be the keynote speaker.

A large exhibit hall will highlight Digital's latest office and professional computers. Among the demonstrations are: personal computing tools, new terminals, business graphics, software, and videotex. There will also be information booths set for the internal support groups.

Programs with detailed registration information will be mailed out in early October. Preregistration is required for the Symposium by November 9. There will be no walk-in registration.

To accommodate attendees' schedule and interests, IDECUS offers four registration options: full day; morning only; afternoon only; or exhibit hall only. Half-day registrations do not include lunch. The exhibit hall is open 3:00 to 5:00 p.m. Registration may now be done on-line through an automatic dial-up system. Or, you may register through the form in the program. For more information contact Internal DECUS, DTN 273-3388.

## DIGITAL THIS WEEK

#### **Editor: Barbara Lovely**

Send stories, photos, ideas or suggestions to DTW, CF02-3/K23 or call the editor at DTN 251-1307. Ads must be submitted in writing to Marketplace, CF02-3/K23. Please direct all Marketplace inquiries to Jennifer Hawes at DTN 251-1308.

Digital This Week is published every other week by the Corporate Employee Communication department of Digital Equipment Corporation for the Employees in the Greater Maynard area.

# Ever wonder who spends your United Way contribution?

It's been called the United Way's "best kept secret" and sets it apart from all other charities. It's the best expression of United Way's financial accountability and strong evidence of how United Way executes the public's trust.

Called the Citizen-Review Process of Allocations, it's the way in which United Way distributes its contributions for human services. The process is simple: local citizens make decisions for their own community.

About 150 men and women volunteer each year to serve on United Way's allocations committees and make decisions on how funds will be spent for health and human services. These people represent a cross-section of their communities. They are very different individuals and possess unique skills, experiences, perspectives and knowledge. Collectively, they have a great impact on the metropolitan Boston area and the people who live there.

They carefully evaluate each United Way agency in five important areas: service objectives; target groups served; program accountability; financing; and management. They make on-site visits to the agencies to meet staff and volunteers. The issues and problems that face the agency and its ability to deliver quality services are discussed.

Distributing United Way dollars is a difficult task which involves trying to meet endless needs with limited dollars, while fulfilling a public trust by being accountable to the contributor. For example, how does one weigh the relative needs of a child with cerebral palsy, an elderly person needing home health care and a teenager who needs drug or alcohol treatment? And the task is made even more challenging by the effects of changing social and economic conditions. The rise in single-parent families and recent government cutbacks in funding impact every community and the needs of all citizens.

These volunteers have another source of help when deciding how to spend contributions: United Way emphases for funding, as expressed in the United Way's "Allocations Emphases Project" (AEP). AEP is a philosophy developed by United Way staff members which sets guidelines on the relative importance of agency services for United Way funding. It tries to answer the question "Which services are most needed in the community and which are most appropriate for United Way funding?"

This Citizen-Review Process is a thorough, thoughtful method used to distribute your contribution. It is directed at accomplishing five important functions: ensuring your gift is wisely spent; providing quality health and human services; maintaining accountability to you, the contributor; reaching critical areas or groups of people who are unserved or underserved; and avoiding wasteful duplication between other private funding sources or government programs.

If you've ever wondered who spends your United Way contribution or how it's done, it's really no secret at all. They are volunteers, trying to spend your pledge in the best way possible. Because that's your intention when you give.

#### Personal Computers Continued from page 1

year with a low-cost service option.

"The Investment Protection Plan backs our promise that Digital produces the highest quality, most reliable products," he added. "It extends this commitment with coverage that is strongest where it is needed most — at the retail level, where individuals from small and medium-sizes businesses who typically need the most start-up help and support tend to buy personal computers."

#### New Rainbow 100+

Joel said the Rainbow 100+ is the most versatile addition to the personal computer product line. The company has targeted the product at small to medium-sized businesses and managers in large corporations. It offers several outstanding features. These include a 10MB Winchester hard disk, a 128KB memory base — which can be expanded to 896KB with a simple-to-install RAM chip — and high quality monochrome graphics and display.

"In addition," Joel said, "Rainbow 100+ is supported by new versions of MS-DOS<sup>®</sup> and CP/M-86/80<sup>®</sup>. This means that the 100+ is compatible with over 70 applica-

tions packages, including Lotus 1-2-3%, one of the most popular integrated software packages available today."

For owners of the Rainbow 100, Joel also announced the availability of an upgrade kit. This can be installed in a matter of moments to provide the same computing power as the 100+.

#### Will make Digital a winner

Ed Kramer, vice president, Corporate Marketing, said the Investment Protection Plan and the new hardware and software will help make Digital a major winner in the multi-billion dollar personal computer market

"Visibility, aggressiveness and the pervasiveness of our activity in this market give us the right to take a leadership role in the business. We intend to accept that role," said Ed. "We know this business and its buyers. And, we will continue to give you our perspective on the marketplace over the long term."

CP/M is a trademark of Digital Research, Inc. MS-DOS is a trademark of Microsoft, Inc. 1-2-3 is a trademark of Lotus Development Corp. 145/06

# Digital thanked for providing work experience for special needs students

Presented with a certificate of recognition by Gov. Dukakis for their work with the Center for Occupational Awareness and Placement are: (I. to r.) Roger Elliot, Bob Fisher, Tony Indrisano, and Gene St. Hilare.

Governor Michael S. Dukakis recently thanked Digital for providing work experience for physically and mentally impaired students. The citation was presented at an employer appreciation luncheon sponsored by the Center for Occupational Awareness and Training (COAP) in Chelmsford.

The goal of COAP is to provide students, age 15 to 22, with intensive training to prepare them for a work setting and to enhance their ability to function independently in their environment. COAP helps students explore career options through

work experience in local business and through COAP's own entrepreneurial activities such as: a plant care business and a catering company. When an individual has received training in a specific career, COAP assists with job placement. Companies like Digital are asked to utilize COAP as a resource for hiring capable, trained people.

Five employees at Digital who have worked with COAP students were honored at the luncheon. They are: Tony Indrisano, facilities administration manager, Bedford; Guy Keenan, plant engineering maintenance supervisor, Bedford; Bob Fisher, plant engineering manager, Burlington; Roger Elliot, facilities manager, Marlboro; and Gene St. Hilaire, maintenance supervisor, Andover.

Roger Elliot explains that counselors from COAP work closely with the students to make sure they fit into the work place. "We don't create special jobs for them," Roger says. "The counselor will go on-site with each student until their schedule and work is defined. We've had excellent experiences with COAP students. They are trained to do the job and to make a contribution. Because of Digital's concern for people and the compassion of our employees, it is easier for students to succeed." he adds.

In Bedford, Tony Indrisano has one COAP graduate who was hired as a permanent employee in plant maintenance. "His work is super. He is totally independent. Beyond his own responsibilities, he makes an extra effort to point things out and learn new skills," Tony says.

Bob Fisher uses COAP's plant maintenance business to keep plants in Digital's facilities in Burlington, Bedford and Westford healthy. Gene St. Hilaire also uses the plant maintenance company to keep Andover greener.

For more information about COAP, contact Wendy Hanson, COAP Director, (617) 256-9148, or write COAP, 160 Turnpike Road, Chelmsford, MA, 01824.

## Digital introduces high-performance single-board 16-bit microcomputers

Three new board-level 16-bit microcomputers that significantly enhance the power and performance of both ends of its LSI-11 (Q-Bus) microcomputer family were recently announced. Additionally, new software development products and a one-year microprocessor board warranty were announced.

The new microcomputers include the LSI-11/73, Digital's most powerful 16-bit microcomputer. Based on the J11 microprocessor, the new high-end model has functionality equivalent to a PDP-11/70 minicomputer. It features extended PDP-11 instruction set, cache memory, four-megabyte address space, and PDP-11 software compatibility on 8.8 by 5.25-inch board.

A new microcomputer, the KXT11-C, which can be used as a general-purpose peripheral processor or a single-board computer, was also introduced. It provides real-time data buffering and preprocessing to a master Q-Bus microcomputer, off-loading communications and increasing system CPU throughput to 90 percent. As many as 14 KXT11-Cs can operate on a single Q-Bus.

An enhanced version of the entry-level Falcon SBC-11/21 single-board micro-computer, Falcon-PLUS, supports the RT-11 operating system, has a higher base-

level memory capacity, and incorporates a new board design.

The three new units broaden the power and flexibility of Digital's microcomputer spectrum, extending it from dedicated PDP-11 controllers to the performance and functionality of a high-end minicomputer's central processor.

Marketed through the OEM Group, the units are targeted for Original Equipment Manufacturers (OEMs) and high-volume end users.

Concurrently, Digital announced two new versions of its Micro-Power/Pascal software and a one-year return-to-factory warranty for the three new microprocessor boards. The new warranty, which can be extended in the United States through service agreements, is the first such support from a major computer manufacturer.

The LSI-11/73 is priced at \$2,180, the KXT11-C at \$1,785, and the Falcon-PLUS at \$790. Volume discounts are available. The products are scheduled to be available December 1983.

According to Robert Maiorana, marketing manager, the three new hardware products substantially enhance the resources of designers building equipment with board-level computers. "The LSI-11/73 provides the high performance required in today's computation-intensive

applications. The KXT11-C offers an easy way to achieve an immediate boost in application throughout for input/output-oriented configurations. All three hardware products use the PDP-11 instruction set and execute application software previously engineered for Q-Bus processors," he said.

Vice President Continued from page 1

Mellon University. He holds a BS in Electrical Engineering from the University of Michigan and MS and PhD degrees in Computer Engineering from Standford University

Jeff joined Digital in 1981 as associate manager for the LSI Group in Hudson, Mass. He was named group manager of LSI in 1982 and has been instrumental in establishing Digital's strong position in the semiconductor business. In this role, Jeff is responsible for the strategic direction of the LSI Group which supplies silicon chips to internal and external customers.

Before joining Digital, Jeff held a number of assignments in the computer and semi-conductor industry working with Texas Instruments, National Semi-Conductor and Data General. Jeff holds a BS in Electrical Engineering from the University of Cincinnati and is vice chairman of the Massachusetts Technology Park Corporation.

## Teamwork key to fiberoptics network product certification

To recognize the contributions of Engineering in product certification, Sharon Wooster, certification manager, presents Tom Sciacca, MDC Hardware Engineering manager with a certificate. Also pictured are members of the Engineering team: (I. to r. standing) Bill Link, Tom Malloy, Al Kimmel, Bob Bohannan, Dave Gilley, Jim Pazaris, and Tram Pham. Sitting are (I. to r.) Greg Molesky, Chris Tran, Dave Michaud, Charlie Johnson and Bill Curtis.

Certification is one of Digital's major quality programs. By following a certification program, quality goals are consistently maintained and manufacturing productivity is greatly enhanced. Estimated to save the corporation some \$600 million over five years, certification supports the elimination of unnecessary retesting in Systems Manufacturing. It is only achieved when stringent Engineering and Manufacturing milestones are met.

To signify the importance, Sharon Wooster, Product Certification manager for

the DYS50 and DYX20 fiberoptics networking products, recently presented certificates to both Engineering and Manufacturing teams responsible for these products.

"Traditionally, Manufacturing receives the certificate and accompanying recognition. I wanted to emphasize the importance of teamwork to accomplish our goals," Sharon explains.

DYXO2 was developed to bring the benefits of fiberoptics to Computer Integrated Manufacturing (CIM) Engineering's

## Run and dance for the United Way at Stow

The Stow facility is sponsoring a United Way Fun Run and Heart Beat Aerobics from 12:00 to 1:00 p.m. on October 18 (rain date, October 20).

All employees are invited to participate in the one-hour run which will circle the Stow facility, (one-half mile). Anyone interested in participating in the Fun Run must acquire pledges for the United Way. T-shirts will be given to all participants who obtain five or more pledges. A copy of the pledge sheet should be turned in for a t-shirt on the day of the race.

Heart Beat (Aerobics) for the United Way is an offshoot of the physical fitness classes presently being held at the Stow facility and is limited to members of that program. Each participant will have the same pledging responsibility as that of the runners, however, their pledges will be based on number of dances they are able to complete during the one-hour time frame.

#### Pledging is simple

- One Fun Run lap around the Stow facility is one-half mile,
- Runners and dancers sign-up individuals who will guarantee to pledge a rate per lap or dance,

 Once the run is complete, the amount of money pledged is collected and turned in to Gwen Bills by October 28.
 All pledges will be matched by Digital.

Prizes

Fun Run winners will be calculated on the number of pledges times the number of laps completed and Heart Beat winners on the number of pledges times the number of dances completed.

A \$35 gift certificate will be awarded to male and female completing the highest number of pledges times laps or dances. \$30 gift certificate will be awarded to male and female completing the second and third highest number of pledges times laps or dances.

Top male and female lap runners will each receive separate prizes, regardless of their pledges. A separate prize will be awarded to the Heart Beat participant whose pledges bring in the largest amount of money in the group, regardless of how many laps or pledges they obtain. A special drawing will be held following the race for four shares of Digital stock. Names will be taken from the United Way Donor cards of employees at the Stow facility.

For sign-up sheets and further information, contact Gwen Bills, DTN 276-9550.

industrial automation customers. The DYXO2 is the corporation's first fiberoptics networking product. "All other fiberoptics products are using the DYXO2 as a model for planning, documenting, product introduction and servicing," says Sharon.

It allows an industrial local area network user to branch from the electrical Digital dataway for more flexible and wider area coverage. Between buildings, the fiber branches insure data integrity from lightning strikes, induced noise from nearby high voltage cables, and differences in electrical ground potential between sites.

The DYXO2, itself, is a wall mountable box which converts electrons to protons and vice versa. The fiber cable is purchased by the user.

The DYS50 was designed by CIM to be much more rugged and serviceable than previously existing Q-Bus packages. These enhancements have resulted in a product that is enormously well received by customers.

It is primarily used in heavy industrial environments, such as steel mills. It must operate in hostile, i.e. not clean, environments. The DYS50 brings continued growth and flexibility to Digital dataway systems architecture. The ability to program the DYS50 combined with an industrial local area network, can tie together a variety of direct control or monitoring instrumentation applications.

# A nickel a day helps the United Way

While a nickel alone doesn't buy much today, putting together a few thousand can equal one tidy sum. That's the philosophy behind the Mill's "Pitch in with cans for United Way" program. Contribute your soda cans in any one of the five drop off points in the Mill and the nickel refund will go towards this year's United Way campaign. The drop off points are located at the five main entrances to the Mill: Main Street, Upper and Lower Thompson Street, Walnut Street and the Security entrance in building 21-1.

Helping people is what United Way is all about, and that's important for you to know. The soda cans you contribute are responsible in part for the encouraging news to those hundreds of thousands who need your help. People who use the varied services of United Way agencies are your fellow workers and next-door neighbors. friends in your community, and members of your own family. You may never hear about them, but they exist. And agency services are there for you too, should the need arise. Above all, one feature of the United Way stands out; people helping people in need. With every can you give to the United Way, know you're touching someone's life. Won't you please "pitch in?" It's the best way to show you care.

### THE MARKETPLACE

## How "The Marketplace" works...

"The Marketplace" is a free service provided by *Digital This Week* for Digital employees in Massachusetts facilities. To service as many employees as possible and to keep the ads timely, *DTW* needs your cooperation.

Please submit one ad at a time. Multiple or duplicate ads will have to be returned. You may list more than one item in an ad if it fits on two lines with about 45 characters to a line. An ad will only be printed once. DTW reserves the right to edit for space.

Ads should be worded clearly, printed or typewritten and be in good taste. Marketplace does not print ads for services or profit making enterprises.

There are no deadlines for Marketplace submission. Ads are printed on a first-come, first-served basis as space allows. Therefore, Marketplace is not always the best vehicle if you want to sell something in a hurry. Ads cannot be taken over the phone.

When submitting an ad, please remember to include all of the following information: full name, mailstop, DTN. Only first names are printed, but we must have your full name for our records. *DTW* does not print home phone numbers. If you sell your item before the ad is published, please call the office to cancel the ad. We can use that space for another listing.

If you have any questions, please call the Marketplace office at DTN 251-1308.

### **NEWS BRIEFS**

#### Deadlines for "Digital This Week"

Deadlines for *Digital This Week* have been established to help you plan events and publicity around certain editions of the paper. Deadlines don't pertain to Marketplace which is first come, first served. The four issues and deadlines for *DTW* are:

Oct. 24 issue - Oct. 12 deadline Nov. 7 issue - Oct. 26 deadline Nov. 21 issue - Nov. 9 deadline Dec. 5 issue - Nov. 24 deadline

#### Women in Information Processing meet

The Boston Chapter of Women in Information Processing will have a monthly dinner meeting on October 17 in Boston. Janice Miller, the international president, will speak on "The Information Age and the Role of Women." For more information contact Mary Ann Haas, DTN 275-6355.

#### Computer Club looks over the Rainbow

On Tues., October 18, the Computer Club will present Paul Hairopoulos discussing the Rainbow and Rainbow software. The meeting will be held in the Corporate Auditorium (PKO3) from 6:00 p.m. to 7:30 p.m. and feature slides and a question and answer period. A business meeting will follow for employees interested in planning future activities. For more information contact Howard Spielman, DTN 249-4608.

#### Address correction for Mill Terminals Servicenter

The address and hours for the Mill Terminals Servicenter were incorrectly listed in the last issue of DTW. The correct address for the Servicenter at the Mill is MLO21-1. The Servicenter is open Monday through Friday from 8:15 to 12:00 noon and from 1:00 to 5:00 p.m. for convenient carry in service. For more information contact Bud Lewis, DTN 223-1229.

#### ALL-IN-1 overview offered

The Internal Office Systems Support (IOSS) group is offering a general ALL-IN-1 overview on October 19 from 1:00 to 4:00 p.m. in the Corporate Auditorium (PKO3-1). The cost of the overview is \$50 per person. To register or to put on a future interest list call DTN 223-ISWS.

#### Hudson holds College Day

Engineering Training and Research is presenting a college information fair on Tuesday, October 18 from 9:00 a.m. to 12:00 noon at the HLO2 Cafeteria. Sixteen area colleges and universities will be on hand to provide information on continuing education opportunities in the surrounding area. For more information contact Lisa Kleman, DTN 225-4091, HLO1-1/007, WAFER::KLEMAN.

#### Safety boating classes offered

The U.S. Coast Guard Auxiliary is offering sail and power boating safety classes at the Assabet Valley Vocational School in Marlboro on Wednesday evenings at 7:00 p.m. The only cost is for books and materials; the classes are free. For more information contact Art Beane, HLO2-3/M06, DTN 225-5329.

#### IEG holds open house

Employees interested in opportunities in customer service management, program management, technical support, marketing communication and account representation are invited to an open house sponsored by the Internal Equipment Group (IEG). It will be held on October 20 in the lobby of the Virginia Road, Concord facility (VRO3-2) from 4:00 to 7:00 p.m. If you're unable to attend or would like more information contact Renita Lawrence, DTN 223-6644.

### METPAY takes holiday

All Metpay offices in the New England area will be closed Monday, October 10 for the Columbus Day holiday.

### Stock Plan enrollment to begin

The next payment period for the Employee Stock Purchase Plan begins on December 1. Prospectuses explaining the plan have been mailed to eligible new employees through internal mail. All other eligible non-participating employees can secure a prospectus from their Personnel Service Administrator (PSA).

To enroll, complete the pre-addressed enrollment card provided on the back page of the prospectus. All enrollment cards must be received at Investor Services no later than November 21. For more information on the stock plan, look for announcements of slide presentations at your site.

#### Marlboro holds blood drive

The Health Services Department of Marlboro is planning a two-day blood drive in October to support a critical need for blood. The Red Cross Bloodmobile will but MRO3 on October 25 and at MRO1 or October 26. For both days the hours are 9:00 a.m. to 2:45 p.m. Call Health Servic for an appointment: MRO1, DTN 231-64 and MRO3, DTN 231-7800.

#### Maynard Toastmasters host "Guest Day"

The Maynard Area Toastmasters will britten international Toastmaster competite to the Mill on Tues., October 18 from 11 to 1:00 in the Mill Cafeteria Conference Room (MLO5-4).

Bob Dae, district governor, will speak "Be Better Than You Are," and Lew Mu international director, will talk on "On Values." To reserve a seat or to ask que tions call Donna Guest, DTN 223-5116 Ruth LeBlanc, DTN 223-5706.

#### Girl Scouts need leaders

The Girl Scouts are running out of moth ers. To remedy their critical leader short age, the Patriots' Trail Girl Scouts Coun which serves Massachusetts locations, i recruiting non-traditional leaders includi men and women without children. For ir formation about becoming a leader cont the Patriots' Trail Council at (617) 482-1078.

#### Metpay provides drive-in claim service in Marlboro

Drive-in claims service is now available for Marlboro area employees who participate in the Metpay program. This service is provided at the Metropolitan Office on Route 20, 180 Boston Post Road in Marlboro.

When a claim is reported, an appointment can be made to have an automobile inspected at the Metropolitan office. The adjustor is available Monday, Tuesday, and Friday from 9:00 a.m. to 4:00 p.m., ir cluding the lunch hour.

#### Bike Club looks at health

The Digital Bicycle Club will hold its next meeting on Tuesday, November 1 at 7:00 p.m. in the Marlboro (MRO3-3) Auditoriui Nancy Clark, nutritionist and exercise physiologist at Sports Medicine Resource Inc., in Boston, will be the guest speaker. Everyone is welcome. For more information contact Kathy Norton, DTN 234-454

## What's the best way to access a computer from home

Many employees require computer access from their homes, and are often unsure of the best access method. As each user's requirements vary, there is no one best way. The following examples illustrate the most common situations, and include specific cost-effective solutions:

User "A" lives in Acton and works in Merrimack. Current requirements involve the need to access a computer at MKO1, after hours and on weekends. The present method involves the user dialing from his home phone directly to the computer. Related toll charges on his personal phone bill are vouchered, approved, and paid through petty cash each month. This results in a direct cost incurrence to the corporation in the form of the Telco phone bill.

A more cost effective method is to have the user dial into the Terminal Switching Network (TSN) locally, avoiding toll charges. This way, the user would log into TSN and be routed to his destination host in MKO1, with no cost to the user, or to Digital. TSN usage charges of 5¢ per thousand characters would be allocated to the employee's cost center. Assuming 15 half-hour calls per month, the user could reduce Digital's annual telephone expenses by some \$700.

User "B" lives in Lunenberg and needs terminal access to a computer located in Maynard. Like user "A" above, this individual has been dialing direct and vouchering his toll charges. There are no TSN dial-in numbers local to Lunenberg. In this case, the user should call a Fitchburg Tymnet dial-in number, local to Lunenberg, and log through TSN to his/her destination host. Public Tymnet charges, which is less than half of the Telco charges, would be allocated to the user's cost center.

User "C" lives in Framingham and requires access to computers at Maynard and Marlboro. Home phone usage for terminal connectivity had been reimbursed at the rate of \$150-\$160 per month. Recently, a less costly Station-off-Premises (SOP) phone had been installed at the employee's residence, from the Marlboro PBX. All usage charges from the SOP (\$121.50), plus the cost of the Marlboro extension number, are also charged to the cost center. As in the above examples, this employee should be using the TSN dial-in capability at Marlboro, saving Digital some \$1500 annually.

User "D," living in Attleboro, has four teenagers and a need for after-hours terminal access to Westminster. This user has had a second telephone number for use with his terminal. His present method of calling the WMO computer is to dial direct, having the entire phone charges billed directly to Digital. As there is a public Tymnet dial-in number for Attleboro, user "D" should dial the local Tymnet access. The Tymnet usage charges will be allocated to the user's cost center. The second phone and line would remain billed to Digital.

User "E" also has a large family to contend with for the use of the home phone. In this example, the user resides in Brockton, has a Station-off-Premise (SOP) from the Franklin PBX, and needs to reach computers at Marlboro and Merrimack. The cost of the SOP extension and related DTN usage charges are presently billed to his cost center.

A more economical method, both to his cost center and to Digital, would be to call a local Brockton Tymnet access number and reach his destination hosts via the TSN network. This alternative would allow for the costly SOP extension to be replaced with a second regular telephone number at his residence, saving Digital some \$1,600 in annual Telco costs. Not limited to home telephone terminal access needs, these methods can be widely used throughout the corporation. For instance, a user visiting a remote site, say Seattle to be extreme, could access his/her EMS or mail account by dialing into a local (Seattle) Tymnet access number and being directly routed to a computer on the TSN network.

Current TSN dial-in access numbers for either 300 or 1200 BPS are listed below. Additional access is planned and will be publicized as available, both in the 'HELP' file and in internal publications.

Acton (617) 264-7490 Maynard (617) 493-1753 Marlboro (617) 467-1233 Waltham (617) 684-1580 Westminster (617) 874-5302 Merrimack, NH (603) 884-2312 Andover (617) 794-3341 Salem, NH (603) 894-2430

The TSN 'HELP' File (type 'HELP' on the TSN network) provides listings of TSN dialin numbers, Public Tymnet access numbers, Network Host numbers, and other useful information, and will be updated as changes occur.

If you would like additional information on how to reduce terminal communications costs while gaining improved transmission quality, consult your local telecomm representative or contact TSN customer services at DTN 273-3313 or 273-3061.

## Have you changed your name, address or phone number?

In order to keep data on the Personnel Master File (PMF) current, Personnel Administration requests employees update their personal files.

It's important that this data be accurate because it is used as the primary sounce of information about employees for Payroll, Benefits, home mailings, and many other employee related processes.

If some of your personal data has changed, complete this form and send it to your PSA/PA. A feedback document will be generated and distributed by your PSA/PA to comfirm that the changes have been made.

The data on the PMF is confidential. Procedures, outlined in the *Personnel Policy and Procedures Manual*, have been established to ensure confidentiality. The information you supply will only be used to update the PMF.

#### **Personal Information Change Form**

Use this form to update personal data when changes occur. Make corrections and send it to your PSA/PA. You are responsible for maintaining this data. Contact your PSA/PA to make any other personal data changes such as earned college degrees, emergency contact, etc.

## Tuning in a master's degree

Watching classes at Andover carried live from Northeastern University are: (I. to r.) Karen Carmean, manager of training and development for PDS, Craig Michaelson, Ralph Palmer, Tom Noll and Michael De La Cruz.

For Michael De La Cruz and Craig Michaelsen, working towards their master's in computer engineering at Northeastern University means walking to the library at Digital's Andover facility and tuning into televised classes. "It's better than driving to campus. By taking two courses here, I can save between five and 10 hours a week in travel time. And if I am away, I can have the class taped and watch it later," Michael explains.

For Craig, it's a chance to get started on the master's degree he's been putting off. "The convenience really appeals to me and I like the mix of electrical engineering and computer science."

Both work in Flexible Manufacturing Technology in Andover and have the support of their supervisors to pursue an advanced degree. "We feel it will provide more skills I can to bring to my job," Michael adds.

What makes the Northeastern program different from other videotaped programs offered in New England is that it is a live telecast with two-way communication. Students can question the instructor via a telephone hook-up. A light on the instructor's desk notifies him or her when a student is "raising their hand."

Northeastern offers 10 courses per semester geared to the needs of Digital and the seven other high-tech companies participating in the program. Students are required to visit Northeastern for exams. Shuttles are provided by Northeastern to

and from Andover for homework and

Under Northeastern's network, hightech companies provide the worksite classrooms and Northeastern supplies the microwave dish antennas and ancillary electronics needed to receive the broadcasts which are beamed from the Prudential Tower in Back Bay.

"Because Andover is behind a hill, we needed a cable hook up to get the classes," explains Karen Carmean, manager of training and development for Process and Design Support, who brought the program to Andover. "It's the first time that university courses have been brought to a company via cable, allowing remote sites to benefit." Rollins Cablevision provides cable signals to the towns of Dracut, Andover, North Reading and Middletown, Mass. At some time, they may be able to offer the classes to the general public in

At Digital, plans call for the master's program to be offered in Hudson in the winter and possibly Marlboro later in the academic year. Northeastern plans to offer business undergraduate and state-of-theart engineering courses in the near future. Anyone interested in more information about the program, can attend a dedication on Monday, October 17 from 3:30 to 5:00 p.m. in the Andover Cafeteria Conference Room or may call Karen Carmean, DTN 289-1220, ERIE::CARMEAN.

## Office Automation Courses

Introduction to Computer Concepts

This workshop includes a basic overview of the computer from a hardware and software perspective. Participants will become familiar with computer terms, applications, hardware, numbering systems, software and general programming concepts.

Local Learning Center - Self-paced instruction

Along with regularly scheduled lecture/lab classes the Local Learning Center is available for self-paced instruction. Some of the offerings include Small System Concepts,

Intro to Minicomputers, VAX 11 Concepts. VAX 11 Construction Set, Effective Writing for Executives, Communicating Successfully and Master Reading. For more detailed listings and information regarding scheduling, please contact the registrar at DTN 223-2872.

To Enroll

Please send the DME/OA Internal Enrollment Request, available from your local Personnel office, to the OA Registrar, PKO3-1/B11. For further information, call the Registrar at DTN 223-5820 or 223-2872

## DCU votes dividend, expands loans

The Digital Credit Union has voted a one percent bonus dividend on its split rate checking account. The bonus will be paid on all accounts with balances over \$2,000. The bonus dividend period is from October 1 to December 31, 1983. The additional bonus will be deposited into each member's account on December 31.

According to DCU President Richard D. Mangone, the credit union bases its rate on national averages reported by Bank Rate Monitor, an independent newspaper based in Miami, FL, which surveys banks throughout the country to determine what each institution is paying. "Bank Rate Monitor lets us stay ahead of our competition and guarantees our members the best possible rate."

The split rate checking account allows unlimited withdrawals, while earning the higher interest of money market funds. Interest rates change weekly. Rates are reported on DCU's hotline, DTN 223-3886.

#### CRT series expanded

The DCU has expanded its personal loan program. The CRT-2500 series line of credit has been upgraded to the CRT-5000 series. Applicants may now apply for a line of credit up to \$5,000. Members accepted into the program will be given a checkbook so they can write themselves a loan merely by writing a check. As they repay the loan, the money is once again available to borrow. The cost of the CRT-5000 loan is less than the cost of a credit card. For more information about the CRT-5000 contact any DCU loan officer.

#### EASY CASH card available

Any Digital Credit Union (DCU) member who has had a DCU checking account for more than six months has an EASY CASH card waiting for them at DCU headquarters. The EASY CASH card allows members to make deposits and withdrawals from DCU's EASY CASH automated teller machines. One machine is presently located on the first floor at Parker Street (PKO3), and a second will be in operation soon at Building 22 at the Mill. Other machines are planned for Marlboro and Merrimack.

The card is also good at MONEC facilities and at PLUS System banks through the country.

The PLUS System has recently introduced an 800 number. People with EASY CASH cards may call 800-THE-PLUS, give their area code and exchange to determine what PLUS SYSTEM banks are in their immediate area.

To receive your card please stop at the receptionist's desk at DCU headquarters PK3-1, pole 22K to sign an application. Or call DTN 223-6735 to receive an application.

Digital Employees Federal Credit Union is a non-profit federally chartered financial institution separate from Digital Equipment Corporation.

## The Computer Museum Bits and Bites

Bits of history and bites for highpoints

At 2 p.m. guided tours

October 16 3 p.m. Perry Crawford on Vannevar Bush and the Whirlwind

Bush's differential analyzer provided the inspiration for the Whirlwind, and Crawford followed the evolution of both at MIT.

October 23 3 p.m.

Robert V.D. Campbell on the Harvard Mark I-IV

A multi-media presentation on these revolutionary computers designed at Harvard presented by Campbell, one of the designers involved with the project from the Mark I on.

October 30 3 p.m. Andries Van Dam presents a Graphical History of Computer Graphics

The progress of interactive computer graphics explored through film and video clips by Van Dam, author of Fundamentals of *Interactive Computer Graphics*.

November 6 3 p.m. Mike Kryskow on the Development of Telecommunciations

A telecommunications engineer, Kryskow will explore the phenomenal growth of networks. Telecommunications networks now link continents, cities and businesses, simplifying everything from banking to weather reporting.

November 13 3 p.m.

Jack Dennis and John McKenzie on the TX-0 in Action

An inside perspective and demonstration of the TX-O, the first full-scale transistorized computer and a Computer Museum exhibit. McKenzie and Dennis worked on the TX-O and its expansion during its 18-year reign at MIT from 1956 to 1974.

### **Enroll for BLISS courses**

Both BLISS courses are being offered this fall and winter.

BLISS I — Introductory Level, teaches students practical and theoretical concepts in reading, debugging, and writing BLISS programs. Topics include storage, iteration, data structures, declarations, routines, modules, and the use of MACRO facilities. Students should be familiar with the system they are using and one high level language. The course will run for five days beginning November 28 at the Bedford Training Center.

BLISS — Advanced Level emphasizes theoretical concepts of BLISS compiler optimization techniques, and other advanced features of the language. Students should complete BLISS I and spend time back on the job before enrolling for BLISS — Advanced Level. Starting dates for this fiveday course are: October 31 and December 5.

To enroll in the BLISS courses, contact the Educational Services Registrar in Bedford at DTN: 249-4670. Software Services employees should contact their regional Software Services registrars to enroll.
